

# FLEAT Roadside Flared Terminal

*FLEAT Steel Post System*

*FLEAT Wood Post System*

## NCHRP 350 Test Level 3 Approved

The **FLEAT** is designed for roadside W-beam barriers.

- Can be used with breakaway wood or steel posts.
- Uses many common standard W-beam barrier components.
- Most components interchangeable w/ SKT & FLEAT-MT terminals.
- Variable offset anywhere between 2'-6" and 4'-0".
- Total length of 37'-6" (11.43 m) for Test Level 3 design speeds.

During end-on impacts, the impact head of the **FLEAT** is forced down the rail section, causing the rail to kink. This safely decelerates the errant vehicle and brings it to a controlled stop.

**PERFORMANCE MAKES THE DIFFERENCE**
